

E100 Installation Instructions for Bathroom Environments

Applicable to E100 Bathroom Speaker Bundle (SE0160)

E100 is designed to be fitted into a bathroom environment, which is clearly different to most other rooms in the home. The nature of this wet environment is recognised by the respective standards authorities, who test products in terms of their suitability to be installed in such areas.

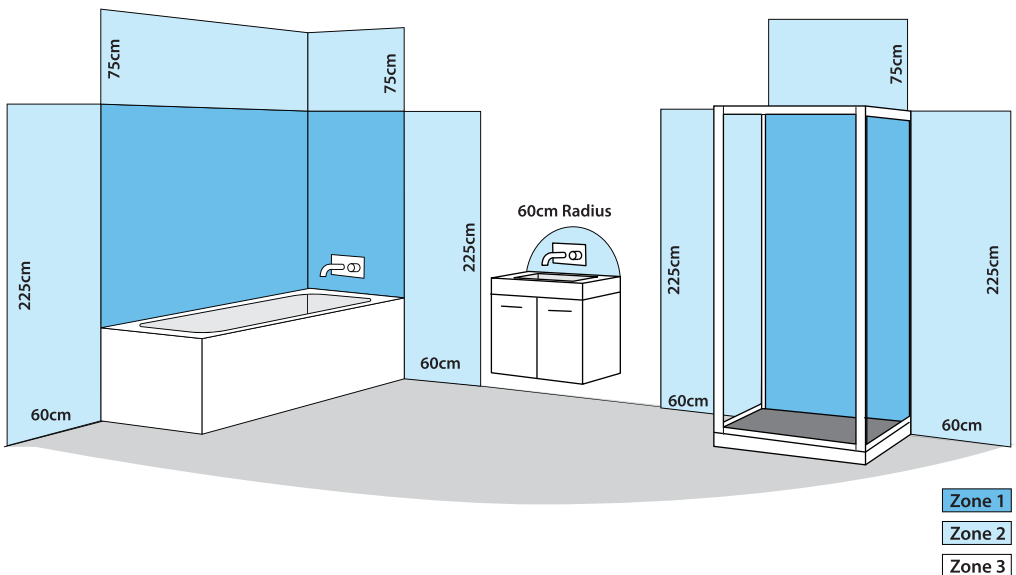

E100 complies with IP54, subject to the following conditions:

1. Wiring

This is defined as an Extra Low Voltage Installation, but the wiring needs to be installed in accordance with 'Part P' of the Design and Installation of Electrical Installations. If in doubt, you are advised to seek assistance from a qualified electrician.

2. Location

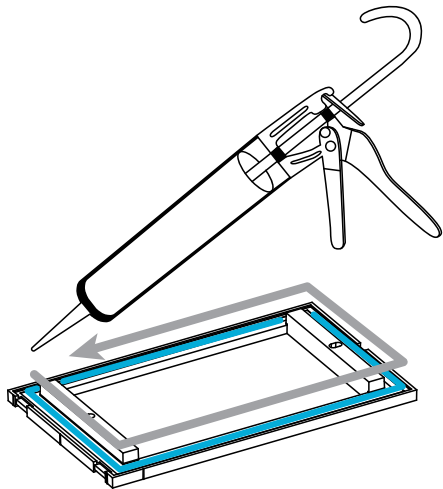

Please refer to the diagram below. The E100 should be installed **outside** of areas designated as zone 1 & 2.

3. Installation

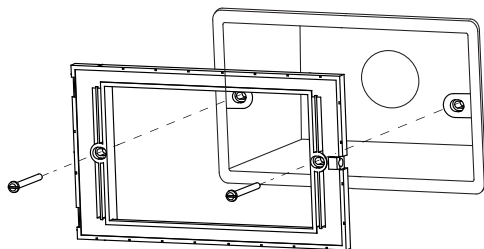

Step 1

Apply silicone sealant on the back of the frame.

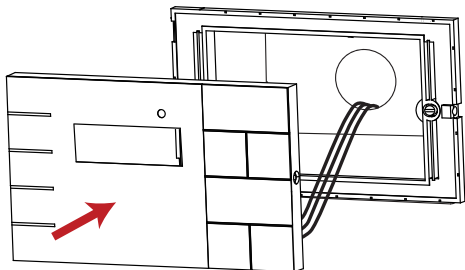

Step 2

Fit the frame onto the back box and secure using 2 screws.

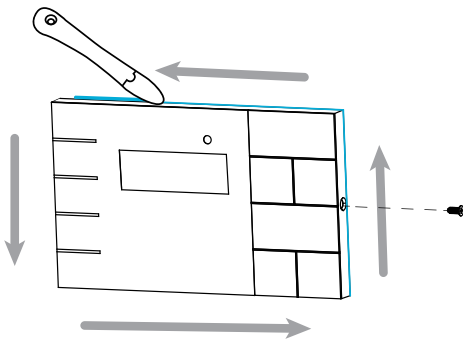

Step 3

Plug cables into keypad and fit into the frame.

Step 4

Secure the front using the screw provided and smooth out the edges using a sealant smoother.

All other instructions for the connection and fitting of E100 apply, except in this instance the left & right speaker wires are connected to a single stereo Q Install speaker (Qi-65 CW-ST). See also instructions supplied with this speaker.
